

6 NEXT STEPS

The King Street Station Access Improvement Study has been prepared to provide the City of Alexandria with documentation for the feasibility of the proposed alternatives for station site and access improvements. After a preferred alternative is selected and the City of Alexandria has acquired funding, Metro will begin working with the City in the preliminary engineering and environmental assessment process. The preliminary engineering process is subject to further review by Metro, the City, DASH, and the citizens of the King Street Station area community through the public hearing process.
